Hello Harry,

One of our contractors went back to the site to double check and remedy BMPs for the potential rain tonight and mentioned that someone from the EPA had stopped by while he was there. He said either Gary or Greg but I'm thinking it might have been you. Anyway, it was mentioned that we should cover up the stained section of asphalt at southern edge of the property, which we proceeded to do. See attached photos for confirmation of the BMPs as they are on site right now.

A small update on the project: We have excavated hopefully the last bit of soil earlier this morning and are awaiting sample data (expected tomorrow around noon). If the samples come back clean we should be all ready for our site meeting on Tuesday with Robert Ehe. We will have our confirmation data tables sent over on Friday for your review. Feel free to call or email if you have comments or questions. Thank you.

Regards,

Matt Kaczmarek
